Subject Index

Actin
Pure thoughts with impure proteins: Permeabilized cell models of organelle motility 715.
The telophase disc: its possible role in mammalian cell cleavage 201.
Activin
Mesodermal growth factor candidates elected 128.
Adhesion
Integrins hold *Drosophila* together 383.
Is segmentation generic? 277.
The making of a feather: homeoproteins, retinoids and adhesion molecules 513.
Algal cells
Pure thoughts with impure proteins: Permeabilized cell models of organelle motility 715.
Allostery
Allosteric proteins: From regulatory enzymes to receptors 625.
Aminoacyl-tRNA synthetases
The aminoacyl-tRNA synthetase family: Modules at work 675.
γ-aminobutyric acid (GABA)
Amino acid neurotransmitter transporters: structure, function, and molecular diversity 323.
Amphibian development
Cyclin synthesis: Who needs it? 149.
Gene expression during metamorphosis: An ideal model for post-embryonic development 239.
Anoxic fibroblast response
Anoxia, wound healing, VL30 elements, and the molecular basis of malignant conversion 265.
Antennapedia
Structure and function of the homeotic gene complex (HOM-C) in the beetle, *Tribolium castaneum* 439.
Antibodies
Recent experiments with MHC knock-out mice: more questions than answers 613.
Antirrhinum
Divergence in the role of MADS box genes in the determination of floral organ identity 691.
Antisense technology
Mechanisms of neural crest cell migration 221.
Antitermination
Common mechanisms for the control of eukaryotic transcriptional elongation 659.
Apolipoprotein B
RNA editing: exploring one mode with Apolipoprotein B mRNA 33.
Apoptosis
Gene expression during metamorphosis: An ideal model for post-embryonic development 239.
Appendage development
In search of the machinery for spatial patterning of animal epithelia 757.
The origin, patterning and evolution of insect appendages 567.
Arabidopsis
Divergence in the role of MADS box genes in the determination of floral organ identity 691.
Glowing reports on biorhythm research 755.
Towards construction of an overlapping YAC library of the *Arabidopsis thaliana* genome 63.
Ascidians
The ascidian embryo as a prototype of vertebrate neurogenesis 723.
Aspartate transcarbamylase
Allosteric proteins: From regulatory enzymes to receptors 625.
Aspergillus nidulans
Meiosis, mitosis and microtubule motors 399.
Assembly processes
Assembly of intermediate filaments 605.
The spliceosome 595.
Astrocytes
Contact inhibition in the failure of mammalian CNS axonal regeneration 807.
The blood-brain barrier: morphology, molecules, and neurothelin 341.
Avian development
Mechanisms of neural crest cell migration 221.
Molecular mechanisms of segmental patterning in the vertebrate hindbrain and neural crest 499.
The making of a feather: homeoproteins, retinoids and adhesion molecules 513.
Axonal growth
Contact inhibition in the failure of mammalian CNS axonal regeneration 807.

Bacillus thuringiensis
The crystal δ-endotoxins of *Bacillus thuringiensis*: models for their mechanism of action on the insect gut 469.
Bacterial infection
Environmental regulation of virulence factors in *Bordetella* species 99.
Exploitation of host signal transduction pathways and cytoskeletal functions by invasive bacteria 17.
Base stacking interactions
Mechanism of action of the *Escherichia coli* UvrABC nuclease: clues to the damage recognition problem 51.
Blood-brain barrier (BBB)
The blood-brain barrier: morphology, molecules, and neurothelin 341.
Bone disorders
Dogs, distemper and Paget's Disease 783.
Bordetella
Environmental regulation of virulence factors in *Bordetella* species 99.
Brain function
"What is life?" – Still a good question, fifty years on 767.
Breast cancer
Challenges: The pharmacological manipulation of members of the transforming growth factor beta family in the chemoprevention of breast cancer 71.
Bristles
In search of the machinery for spatial patterning of animal epithelia 757.

Caenorhabditis elegans
Chemosensory regulation of development in *C. elegans* 791.
Germ line development 699.
Camptothecin
SV40 DNA replication intermediates: Analysis of drugs which target mammalian DNA replication 121.
Cancer
An apparent dimerization motif in the third domain of alpha-

fetoprotein: Molecular mimicry of the steroid/thyroid nuclear receptor superfamily 427.
Anoxia, wound healing, VL30 elements, and the molecular basis of malignant conversion 265.
Challenges: The pharmacological manipulation of members of the transforming growth factor beta family in the chemoprevention of breast cancer 71.
Discerning the function of p53 by examining its molecular interactions 703.
Molecular biology of double-minute chromosomes 477.
Mutation of N-*myc* in mice: What does the phenotype tell us? 273.
The role of DNA repeats and associated secondary structures in genomic instability and neoplasia 409.
Urokinase and urokinase receptor: A paracrine/autocrine system regulating cell migration and invasiveness 105.

Catalytic mechanisms
RNA as a catalyst: natural and designed ribozymes 299.

Catfish
Odor receptor proteins recloned: molecular realities of olfactory discrimination in fish 487.

Cell ablation
Conditional cell ablation in *Drosophila* 491.

Cell commitment
Cell commitment in the ectoderm of *Drosophila melanogaster* 197.

Cell cycle
Discerning the function of p53 by examining its molecular interactions 703.
DNA damage and cell cycle regulation of ribonucleotide reductase 333.
Feedback controls and G2 checkpoints: fission yeast as a model system 775.
Fine tuning of DNA repair: Mechanisms, prevalence and consequences 209.
Intracellular pH regulation in the early embryo 523.
Molecular biology of double-minute chromosomes 477.
Regulation of zygotic gene activation in the mouse 531.
The centromere of budding yeast 451.
The p53-*mdm2* autoregulatory feedback loop: A paradigm for the regulation of growth control by p53? 689.
The telophase disc: its possible role in mammalian cell cleavage 201.

Cell division
The telophase disc: its possible role in mammalian cell cleavage 201.

Cell fates
The ascidian embryo as a prototype of vertebrate neurogenesis 723.
The specification of sensory neuron identity in *Drosophila* 293.

Cell junctions
Integrins hold *Drosophila* together 383.

Cell lineage
The ascidian embryo as a prototype of vertebrate neurogenesis 723.

Cell migration
Mechanisms of neural crest cell migration 221.

Cell models
Pure thoughts with impure proteins: Permeabilized cell models of organelle motility 715.

Cell-cell interactions
The specification of sensory neuron identity in *Drosophila* 293.

Central nervous system (CNS)
Contact inhibition in the failure of mammalian CNS axonal regeneration 807.

Centromeres
The centromere of budding yeast 451.
What determines whether chromosomes segregate reductionally or equationally in meiosis? 1.

Checkpoints
Feedback controls and G2 checkpoints: fission yeast as a model system 775.

Chemosensory organs
Chemosensory regulation of development in *C. elegans* 791.

Chlorambucil
High-frequency induction of chromosomal rearrangements in mouse germ cells by the chemotherapeutic agent chlorambucil 831.

Chloride transport
Cystic fibrosis: prospects for therapy 485.

Chromatophores
Pure thoughts with impure proteins: Permeabilized cell models of organelle motility 715.

Chromosomal breaks
Molecular biology of double-minute chromosomes 477.
The role of DNA repeats and associated secondary structures in genomic instability and neoplasia 409.

Chromosome structure
Chromosome bands-flavours to savour 349.
Fine tuning of DNA repair: Mechanisms, prevalence and consequences 209.
Polyamines, chromatin structure and transcription 561.
The centromere of budding yeast 451.
X Chromosome inactivation: The feminine mystique continues 825.

Chromosomes
Microdissection and microcloning of human chromosome regions in genome and genetic disease analysis 141.
SV40 DNA replication intermediates: Analysis of drugs which target mammalian DNA replication 121.
What determines whether chromosomes segregate reductionally or equationally in meiosis? 1.

Circadian cycles
Glowing reports on biorhythm research 755.

Competence
When cells take fate into their own hands: differential competence to respond to inducing signals generates diversity in the embryonic mesoderm 135.

Concanavalin A
Protein splicing: Excision of intervening sequences at the protein level 667.

Connective tissue
The fibrillin-marfan syndrome connection 589.

Craniofacial development
Retinoic acid and craniofacial development: molecules and morphogenesis 9.

Crigler-Najjar Syndrome
Human UDP-glucuronosyl transferases: chemical defence, jaundice and gene therapy 749.

Cross-regulation
Mechanisms of transactivation by retinoic acid receptors 309.
Mutation of N-*myc* in mice: What does the phenotype tell us? 273.

cut
The specification of sensory neuron identity in *Drosophila* 293.

Cyclic AMP
Pure thoughts with impure proteins: Permeabilized cell models of organelle motility 715.
The molecular biology of taste transduction 645.

Cyclin
Cyclin synthesis: Who needs it? 149.
Cyclosporine A
Immunosuppressants: tools to investigate the physiological role of cytokines 731.
Cystic fibrosis
Cystic fibrosis: prospects for therapy 485.
Cytogenetics
Chromosome bands-flavours to savour 349.
Cytokines
Dogs, distemper and Paget's Disease 783.
Immunosuppressants: tools to investigate the physiological role of cytokines 731.
Cytoplasmic genes
Altering sex ratios: The games microbes play 695.
Cytoskeleton
Dystrophin as a mechanochemical transducer in skeletal muscle 413.
Exploitation of host signal transduction pathways and cytoskeletal functions by invasive bacteria 17.
Localized RNAs and their functions 651.

Deformed
Structure and function of the homeotic gene complex (HOM-C) in the beetle, *Tribolium castaneum* 439.
Deletions
High-frequency induction of chromosomal rearrangements in mouse germ cells by the chemotherapeutic agent chlorambucil 831.
Developmental programs
Cellular dedifferentiation and spore germination in *Dictyostelium* may utilize similar regulatory pathways 131.
Senescence and the genome or, Change and decay in all except lobsters, I see 359.
Dictyostelium discoideum
Cellular dedifferentiation and spore germination in *Dictyostelium* may utilize similar regulatory pathways 131.
Differentiation markers
The ascidian embryo as a prototype of vertebrate neurogenesis 723.
Diffusion
Protein lateral mobility as a reflection of membrane microstructure 579.
Dihydroxyphenylalanine (DOPA)
The blood-brain barrier: morphology, molecules, and neurothelin 341.
Distalless (D11)
The origin, patterning and evolution of insect appendages 567.
DNA-binding proteins
A signature for the HMG-1 box DNA-binding proteins 539.
Bending of DNA by transcription factors 25.
Bending of DNA by transcription factors 25.
DNA damage and cell cycle regulation of ribonucleotide reductase 333.
Mechanism of action of the *Escherichia coli* UvrABC nuclease: clues to the damage recognition problem 51.
Mechanisms of transactivation by retinoic acid receptors 309.
Polyamines, chromatin structure and transcription 561.
Relating biochemistry to biology: How the recombinational repair function of the recA protein is manifested in its molecular properties 617.
SV40 DNA replication intermediates: Analysis of drugs which target mammalian DNA replication 121.
Telomeric DNA binding proteins 555.
The centromere of budding yeast 451.
DNA damage response
DNA damage and cell cycle regulation of ribonucleotide reductase 333.
DNA diagnostics
Ligation-based DNA diagnostics 761.
DNA ligases
Ligation-based DNA diagnostics 761.
DNA methylation
Dynamics of DNA methylation during development 709.
DNA polymerase
Protein splicing: Excision of intervening sequences at the protein level 667.
DNA repair
Differential repair of excision gaps generated by transposable elements of the 'Ac family' 507.
Feedback controls and G2 checkpoints: fission yeast as a model system 775.
Fine tuning of DNA repair: Mechanisms, prevalence and consequences 209.
Mechanism of action of the *Escherichia coli* UvrABC nuclease: clues to the damage recognition problem 51.
Relating biochemistry to biology: How the recombinational repair function of the recA protein is manifested in its molecular properties 617.
Senescence and the genome or, Change and decay in all except lobsters, I see 359.
DNA replication
Chromosome bands-flavours to savour 349.
DNA damage and cell cycle regulation of ribonucleotide reductase 333.
Gene delivery to neurons: is herpes simplex virus the right tool for the job? 547.
Multiple bacterial topoisomerases: specialization or redundancy? 445.
SV40 DNA replication intermediates: Analysis of drugs which target mammalian DNA replication 121.
X Chromosome inactivation: The feminine mystique continues 825.
DNA structures
A signature for the HMG-1 box DNA-binding proteins 539.
Multiple bacterial topoisomerases: specialization or redundancy? 445.
Simplicity amidst complexity in transcriptional initiation 559.
Telomeric DNA binding proteins 555.
DNA transfection
Genes controlling nucleotide excision repair in eukaryotic cells 249.
Protein targeting to dense-core secretory granules 317.
Dorso-ventral patterning
Cell commitment in the ectoderm of *Drosophila melanogaster* 197.
Double-strand breaks
Differential repair of excision gaps generated by transposable elements of the 'Ac family' 507.
Drosophila
Cell commitment in the ectoderm of *Drosophila melanogaster* 197.
Conditional cell ablation in *Drosophila* 491.
Defining a neural ground state and photoreceptor cell identities in the *Drosophila* eye 827.
Differential repair of excision gaps generated by transposable elements of the 'Ac family' 507.
Germ line development 699.

Glowing reports on biorhythm research 755.
In search of the machinery for spatial patterning of animal epithelia 757.
Integrins hold *Drosophila* together 383.
Is segmentation generic? 277.
Localized RNAs and their functions 651.
Microdissection and microcloning of human chromosome regions in genome and genetic disease analysis 141.
Molecular mechanisms of segmental patterning in the vertebrate hindbrain and neural crest 499.
Structure and function of the homeotic gene complex (HOM-C) in the beetle, *Tribolium castaneum* 439.
The evolutionary history of the first three enzymes in pyrimidine biosynthesis 157.
The origin, patterning and evolution of insect appendages 567.
The specification of sensory neuron identity in *Drosophila* 293.

Dystrophin
Dystrophin as a mechanochemical transducer in skeletal muscle 413.

Ecdysone
Gene expression during metamorphosis: An ideal model for post-embryonic development 239.

EGF receptor
What the papers say: Do specific interactions between transmembrane helices play a part in signalling transduction? Exploration with the insulin receptor 61.

Embryogenesis
Localized RNAs and their functions 651.
The origin, patterning and evolution of insect appendages 567.

Embryonic development
Conditional cell ablation in *Drosophila* 491.
Dynamics of DNA methylation during development 709.
Integrins hold *Drosophila* together 383.

Endocytosis
Endocytosis of growth factor receptors 375.

Endonucleases
Protein splicing: Excision of intervening sequences at the protein level 667.

Endoplasmic reticulum (ER)
Protein trafficking along the exocytotic pathway 231.

Endosomes
Endocytosis of growth factor receptors 375.

Endothelial cells
The blood-brain barrier: morphology, molecules, and neurothelin 341.

Endotoxins
The crystal δ-endotoxins of *Bacillus thuringiensis*: models for their mechanism of action on the insect gut 469.

Enzymes
The evolutionary history of the first three enzymes in pyrimidine biosynthesis 157.

Epidermal growth factor (EGF)
Endocytosis of growth factor receptors 375.

Escherichia coli
Genes controlling nucleotide excision repair in eukaryotic cells 249.
Mechanism of action of the *Escherichia coli* UvrABC nuclease: clues to the damage recognition problem 51.
Multiple bacterial topoisomerases: specialization or redundancy? 445.
RNA processing in prokaryotic cells 113.
RuvA, RuvB and RuvC proteins: cleaning-up after recombinational repairs in *E. coli* 355.
The penicillin method of mutant selection 837.
The secretion pathway of IgA protease-type proteins in Gram-negative bacteria 799.

Evolution
Movement of virus and photoassimilate in the phloem: a comparative analysis 741.
Relating biochemistry to biology: How the recombinational repair function of the recA protein is manifested in its molecular properties 617.
Senescence and the genome or, Change and decay in all except lobsters, I see 359.
The origin, patterning and evolution of insect appendages 567.

Exocytosis
Protein targeting to dense-core secretory granules 317.
Protein trafficking along the exocytotic pathway 231.

Extracellular matrix (ECM)
Mechanisms of neural crest cell migration 221.
The fibrillin-marfan syndrome connection 589.

Eye development
Defining a neural ground state and photoreceptor cell identities in the *Drosophila* eye 827.

Fate maps
Cell commitment in the ectoderm of *Drosophila melanogaster* 197.

Fatty acid acylation
Dystrophin as a mechanochemical transducer in skeletal muscle 413.

Feather development
The making of a feather: homeoproteins, retinoids and adhesion molecules 513.

Ferritin
Translational regulation by mRNA/protein interactions in eukaryotic cells: Ferritin and beyond 85.

Fetal development
RNA editing: exploring one mode with Apolipoprotein B mRNA 33.

α-fetoprotein
An apparent dimerization motif in the third domain of alpha-fetoprotein: Molecular mimicry of the steroid/thyroid nuclear receptor superfamily 427.

FGF
Mesodermal growth factor candidates elected 128.

Fibrillin
The fibrillin-marfan syndrome connection 589.

Fibroblasts
Anoxia, wound healing, VL30 elements, and the molecular basis of malignant conversion 265.

Floral development
Divergence in the role of MADS box genes in the determination of floral organ identity 691.

Fungal development
Genetic control of fungal differentiation: The three sporulation pathways of *Neurospora crassa* 365.

G proteins
Interaction of rhodopsin with the G-protein, transducin 43.
The molecular biology of taste transduction 645.

Gene amplicication
Molecular biology of double-minute chromosomes 477.

Gene detection
Ligation-based DNA diagnostics 761.

Gene knock-outs
Mutation of N-*myc* in mice: What does the phenotype tell us? 273.
Recent experiments with MHC knock-out mice: more questions than answers 613.
Gene structure
Pre-mRNA secondary structure and the regulation of splicing 165.
The evolutionary history of the first three enzymes in pyrimidine biosynthesis 157.
Gene targetting
Mutation of N-*myc* in mice: What does the phenotype tell us? 273.
Gene therapy
Cystic fibrosis: prospects for therapy 485.
Human UDP-glucuronosyl transferases: chemical defence, jaundice and gene therapy 749.
Genetic defects
Amino acid neurotransmitter transporters: structure, function, and molecular diversity 323.
Cystic fibrosis: prospects for therapy 485.
Dystrophin as a mechanochemical transducer in skeletal muscle 413.
Gene delivery to neurons: is herpes simplex virus the right tool for the job? 547.
Human UDP-glucuronosyl transferases: chemical defence, jaundice and gene therapy 749.
Ligation-based DNA diagnostics 761.
The fibrillin-marfan syndrome connection 589.
Werner syndrome and biological ageing: a molecular genetic hypothesis 421.
Genetic disease
Microdissection and microcloning of human chromosome regions in genome and genetic disease analysis 141.
Genetic predispositions
Dogs, distemper and Paget's Disease 783.
Genetic recombination
Chromosome bands-flavours to savour 349.
Relating biochemistry to biology: How the recombinational repair function of the recA protein is manifested in its molecular properties 617.
RuvA, RuvB and RuvC proteins: cleaning-up after recombinational repairs in *E. coli* 355.
What determines whether chromosomes segregate reductionally or equationally in meiosis? 1.
Genome research
Chromosome bands – flavours to savour 349
Towards construction of an overlapping YAC library of the *Arabidopsis thaliana* genome 63.
High-frequency induction of chromosomal rearrangements in mouse germ cells by the chemotherapeutic agent chlorambucil 831.
Ligation-based DNA diagnostics 761.
Microdissection and microcloning of human chromosome regions in genome and genetic disease analysis 141.
Genomic instability
Molecular biology of double-minute chromosomes 477.
The role of DNA repeats and associated secondary structures in genomic instability and neoplasia 409.
Werner syndrome and biological ageing: a molecular genetic hypothesis 421.
Germ line
Germ line development 699.
High-frequency induction of chromosomal rearrangements in mouse germ cells by the chemotherapeutic agent chlorambucil 831.
Glial cells
The blood-brain barrier: morphology, molecules, and neurothelin 341.
Glucuronidation
Human UDP-glucuronosyl transferases: chemical defence, jaundice and gene therapy 749.
Glutamate transporters
Amino acid neurotransmitter transporters: structure, function, and molecular diversity 323.
Golgi apparatus
Protein targeting to dense-core secretory granules 317.
Protein trafficking along the exocytotic pathway 231.
Gonyaulax
Glowing reports on biorhythm research 755.
Growth cones
Contact inhibition in the failure of mammalian CNS axonal regeneration 807.
Growth control
The p53-*mdm2* autoregulatory feedback loop: A paradigm for the regulation of growth control by p53? 689.
Growth factors
Endocytosis of growth factor receptors 375.
Steel factor and c-Kit receptor: From mutants to a growth factor system 77.
GTPases
The assembly of signalling complexes by activated growth factor receptors 171.
Vav: a potential link between tyrosine kinases and *RAS*-like GTPases in hematopoietic cell signaling 179.
Gustducin
The molecular biology of taste transduction 645.
Gyrase
Multiple bacterial topoisomerases: specialization or redundancy? 445.

Helicases
RuvA, RuvB and RuvC proteins: cleaning-up after recombinational repairs in *E. coli* 355.
Hematopoiesis
Immunosuppressants: tools to investigate the physiological role of cytokines 731.
Vav: a potential link between tyrosine kinases and *RAS*-like GTPases in hematopoietic cell signaling 179.
Hemoglobin
Allosteric proteins: From regulatory enzymes to receptors 625.
Herpes Simplex Virus (HSV)
Gene delivery to neurons: is herpes simplex virus the right tool for the job? 547.
HIV-1
Common mechanisms for the control of eukaryotic transcriptional elongation 659.
HMG proteins
A signature for the HMG-1 box DNA-binding proteins 539.
Homeobox genes
Cellular and molecular diversity in muscle development: news from *in vitro* and *in vivo* 191.
Homeotic gene complex (HOM-C)
Structure and function of the homeotic gene complex (HOM-C) in the beetle, *Tribolium castaneum* 439.
Homeotic genes
Divergence in the role of MADS box genes in the determination of floral organ identity 691.
The origin, patterning and evolution of insect appendages 567.

Homogeneously staining regions (HSRs)
Molecular biology of double-minute chromosomes 477.
Hormonal controls
Gene expression during metamorphosis: An ideal model for post-embryonic development 239.
***Hox* gene**
Molecular mechanisms of segmental patterning in the vertebrate hindbrain and neural crest 499.
The making of a feather: homeoproteins, retinoids and adhesion molecules 513.
Human embryos
Early human embryo metabolism 259.

IgA protease-type proteins
The secretion pathway of IgA protease-type proteins in Gram-negative bacteria 799.
Immune system
Recent experiments with MHC knock-out mice: more questions than answers 613.
Immunosuppressants
Immunosuppressants: tools to investigate the physiological role of cytokines 731.
Imprinting
Dynamics of DNA methylation during development 709.
***In vitro* fertilization (IVF)**
Early human embryo metabolism 259.
Information Theory
"What is life?" – Still a good question, fifty years on 767.
Insulin receptor
What the papers say: Do specific interactions between transmembrane helices play a part in signalling transduction? Exploration with the insulin receptor 61.
Integrins
Dynamic aspects of adhesion receptor function – Integrins both twist and shout 391.
Integrins hold *Drosophila* together 383.
Mechanisms of neural crest cell migration 221.
Intermediate filaments
Assembly of intermediate filaments 605.
Introns
Mammalian cells can trans-splice. But do they? 347.
Pre-mRNA secondary structure and the regulation of splicing 165.
Protein splicing: Excision of intervening sequences at the protein level 667.
RNA as a catalyst: natural and designed ribozymes 299.
RNA processing in prokaryotic cells 113.
The spliceosome 595.
Ion channels
The ascidian embryo as a prototype of vertebrate neurogenesis 723.
Ion transport
Intracellular pH regulation in the early embryo 523.
'Iron switch model'
Translational regulation by mRNA/protein interactions in eukaryotic cells: Ferritin and beyond 85.
'Isochores'
Chromosome bands-flavours to savour 349.

Junctions
The crystal δ-endotoxins of *Bacillus thuringiensis*: models for their mechanism of action on the insect gut 469.
Keratins
Assembly of intermediate filaments 605.
Kinesin
Meiosis, mitosis and microtubule motors 399.
Kinetochores
Meiosis, mitosis and microtubule motors 399.
c-*kit*
Steel factor and c-Kit receptor: From mutants to a growth factor system 77.

Lambda phage
Bacteriophage λ: Transactivation, positive control and other odd findings 285.
Lamins
Assembly of intermediate filaments 605.
Leaf structure
Movement of virus and photoassimilate in the phloem: a comparative analysis 741.
Lederberg, Joshua
The penicillin method of mutant selection 837.
Lepidoptera
The crystal δ-endotoxins of *Bacillus thuringiensis*: models for their mechanism of action on the insect gut 469.
Leucine zippers
An apparent dimerization motif in the third domain of alpha-fetoprotein: Molecular mimicry of the steroid/thyroid nuclear receptor superfamily 427.
Lipids
Protein lateral mobility as a reflection of membrane microstructure 579.
Localized RNAs
Localized RNAs and their functions 651.
Lymphocytes
Recent experiments with MHC knock-out mice: more questions than answers 613.
L-threonie deaminase
Allosteric proteins: From regulatory enzymes to receptors 625.

Maize
Differential repair of excision gaps generated by transposable elements of the 'Ac family' 507.
Major Histocompatibility Complex (MHC)
Recent experiments with MHC knock-out mice: more questions than answers 613.
Mammalian development
Early human embryo metabolism 259.
Gene expression during metamorphosis: An ideal model for post-embryonic development 239.
Marfan Syndrome
The fibrillin-marfan syndrome connection 589.
Maternal mRNAs
Localized RNAs and their functions 651.
Maturation promoting factor (MPF)
Cyclin synthesis: Who needs it? 149.
McClintock, Barbara
Differential repair of excision gaps generated by transposable elements of the 'Ac family' 507.
mdm-2
The p53-*mdm2* autoregulatory feedback loop: A paradigm for the regulation of growth control by p53? 689.
Meiosis
Cyclin synthesis: Who needs it? 149.
Meiosis, mitosis and microtubule motors 399.
The centromere of budding yeast 451.
What determines whether chromosomes segregate reductionally or equationally in meiosis? 1.

Melanocytes
Steel factor and c-Kit receptor: From mutants to a growth factor system 77.
Membrane structure
Protein lateral mobility as a reflection of membrane microstructure 579.
Mesodermal development
In pursuit of the functions of the *Wnt* family of developmental regulators: Insights from *Xenopus laevis* 91.
Mesodermal growth factor candidates elected 128.
When cells take fate into their own hands: differential competence to respond to inducing signals generates diversity in the embryonic mesoderm 135.
c-*met*
Tyrosine kinase receptors in the control of epithelial growth and morphogenesis during development 185.
Metabolism
Early human embryo metabolism 259.
Human UDP-glucuronosyl transferases: chemical defence, jaundice and gene therapy 749.
The evolutionary history of the first three enzymes in pyrimidine biosynthesis 157.
Metamorphosis
Gene expression during metamorphosis: An ideal model for post-embryonic development 239.
Metastasis
Urokinase and urokinase receptor: A paracrine/autocrine system regulating cell migration and invasiveness 105.
Methylation
X Chromosome inactivation: The feminine mystique continues 825.
Microdissection
Microdissection and microcloning of human chromosome regions in genome and genetic disease analysis 141.
Microorganisms
Altering sex ratios: The games microbes play 695.
Microtubule motors
Meiosis, mitosis and microtubule motors 399.
Microtubules
Pure thoughts with impure proteins: Permeabilized cell models of organelle motility 715.
γ-tubulin: the hub of cellular microtubule assemblies 637.
Mitochondrial RNA
RNA editing: exploring one mode with Apolipoprotein B mRNA 33.
Mitosis
Cyclin synthesis: Who needs it? 149.
Feedback controls and G2 checkpoints: fission yeast as a model system 775.
Meiosis, mitosis and microtubule motors 399.
The centromere of budding yeast 451.
The telophase disc: its possible role in mammalian cell cleavage 201.
Tubulin: the hub of cellular microtubule assemblies 637.
Molecular evolution
Amino acid neurotransmitter transporters: structure, function, and molecular diversity 323.
Multiple bacterial topoisomerases: specialization or redundancy? 445.
The aminoacyl-tRNA synthetase family: Modules at work 675.
The evolutionary history of the first three enzymes in pyrimidine biosynthesis 157.
Monod, Jacques
Allosteric proteins: From regulatory enzymes to receptors 625.
Morphogenesis
In pursuit of the functions of the *Wnt* family of developmental regulators: Insights from *Xenopus laevis* 91.
The origin, patterning and evolution of insect appendages 567.
Mouse development
Dynamics of DNA methylation during development 709.
Germ line development 699.
Intracellular pH regulation in the early embryo 523.
Molecular mechanisms of segmental patterning in the vertebrate hindbrain and neural crest 499.
Mutation of N-*myc* in mice: What does the phenotype tell us? 273.
Regulation of zygotic gene activation in the mouse 531.
Retinoic acid and craniofacial development: molecules and morphogenesis 9.
Steel factor and c-Kit receptor: From mutants to a growth factor system 77.
MTOCs
γ-tubulin: the hub of cellular microtubule assemblies 637.
Muscle development
Cellular and molecular diversity in muscle development: news from *in vitro* and *in vivo* 191.
Dystrophin as a mechanochemical transducer in skeletal muscle 413.
Muscular dystrophy
Dystrophin as a mechanochemical transducer in skeletal muscle 413.
Mutation
Chromosome bands – flavours to savour 349.
High-frequency induction of chromosomal rearrangements in mouse germ cells by the chemotherapeutic agent chlorambucil 831.
The penicillin method of mutant selection 837.
C-*myc*
Common mechanisms for the control of eukaryotic transcriptional elongation 659.
N-*myc* gene
Mutation of N-*myc* in mice: What does the phenotype tell us? 273.
Myelopoiesis
Immunosuppressants: tools to investigate the physiological role of cytokines 731.
Myoblasts
Cellular and molecular diversity in muscle development: news from *in vitro* and *in vivo* 191.
MyoD
Cellular and molecular diversity in muscle development: news from *in vitro* and *in vivo* 191.
Myosin
The telophase disc: its possible role in mammalian cell cleavage 201.

Neisseria
The secretion pathway of IgA protease-type proteins in Gram-negative bacteria 799.
***neu* oncogene**
Neu and its ligands: from an oncogene to neural factors 815.
Tyrosine kinase receptors in the control of epithelial growth and morphogenesis during development 185.
Do specific interactions between transmembrane helices play a part in signalling transduction? Exploration with the insulin receptor 61.
Neural crest
Mechanisms of neural crest cell migration 221.

Neural development
Chemosensory regulation of development in *C. elegans* 791.
Contact inhibition in the failure of mammalian CNS axonal regeneration 807.
Defining a neural ground state and photoreceptor cell identities in the *Drosophila* eye 827.
Gene delivery to neurons: is herpes simplex virus the right tool for the job? 547.
Mechanisms of neural crest cell migration 221.
Molecular mechanisms of segmental patterning in the vertebrate hindbrain and neural crest 499.
The ascidian embryo as a prototype of vertebrate neurogenesis 723.
The specification of sensory neuron identity in *Drosophila* 293.
Neuregulin
Neu and its ligands: from an oncogene to neural factors 815.
Neurogenesis
Cell commitment in the ectoderm of *Drosophila melanogaster* 197.
Neuronal cells
The blood-brain barrier: morphology, molecules, and neurothelin 341.
Tubulin: the hub of cellular microtubule assemblies 637.
Neurospora crassa
Genetic control of fungal differentiation: The three sporulation pathways of *Neurospora crassa* 365.
Neurothelin
The blood-brain barrier: morphology, molecules, and neurothelin 341.
Neurotransmitters
Amino acid neurotransmitter transporters: structure, function, and molecular diversity 323.
Notch
The specification of sensory neuron identity in *Drosophila* 293.
Nuclear receptor superfamily
Mechanisms of transactivation by retinoic acid receptors 309.
Nucleoprotein complexes
Bending of DNA by transcription factors 25.
Nucleosomes
Fine tuning of DNA repair: Mechanisms, prevalence and consequences 209.
Polyamines, chromatin structure and transcription 561.
Nucleotide excision repair (NER)
Genes controlling nucleotide excision repair in eukaryotic cells 249.
Mechanism of action of the *Escherichia coli* UvrABC nuclease: clues to the damage recognition problem 51.
Nucleotide metabolism
DNA damage and cell cycle regulation of ribonucleotide reductase 333.

Odor receptor proteins
Odor receptor proteins recloned: molecular realities of olfactory discrimination in fish 487.
Olfaction
Odor receptor proteins recloned: molecular realities of olfactory discrimination in fish 487.
Oligodendrocytes
Contact inhibition in the failure of mammalian CNS axonal regeneration 807.
Oogenesis
Cyclin synthesis: Who needs it? 149.
Organelle motility
Pure thoughts with impure proteins: Permeabilized cell models of organelle motility 715.
Organelle movement
Meiosis, mitosis and microtubule motors 399.
Origins of life
"What is life?" – Still a good question, fifty years on 767.
Osteoclasts
Dogs, distemper and Paget's Disease 783.
Ovalbumin
The role of conformational change in serpin structure and function 461.
Oxytricha
Telomeric DNA binding proteins 555.

p53 protein
Discerning the function of p53 by examining its molecular interactions 703.
The p53-*mdm2* autoregulatory feedback loop: A paradigm for the regulation of growth control by p53? 689.
Paget's Disease
Dogs, distemper and Paget's Disease 783.
Pattern formation
In search of the machinery for spatial patterning of animal epithelia 757.
Is segmentation generic? 277.
Structure and function of the homeotic gene complex (HOM-C) in the beetle, *Tribolium castaneum* 439.
The origin, patterning and evolution of insect appendages 567.
Penicillin selection
The penicillin method of mutant selection 837.
PER protein
Glowing reports on biorhythm research 755.
Peripheral nervous system (PNS)
The specification of sensory neuron identity in *Drosophila* 293.
pH regulation
Intracellular pH regulation in the early embryo 523.
Phage lambda
Bacteriophage λ: Transactivation, positive control and other odd findings 285.
Common mechanisms for the control of eukaryotic transcriptional elongation 659.
Pheromones
Chemosensory regulation of development in *C. elegans* 791.
Phloem
Movement of virus and photoassimilate in the phloem: a comparative analysis 741.
Phospholipase C
The assembly of signalling complexes by activated growth factor receptors 171.
Photoreceptors
Conditional cell ablation in *Drosophila* 491.
Defining a neural ground state and photoreceptor cell identities in the *Drosophila* eye 827.
Interaction of rhodopsin with the G-protein, transducin 43.
Physarum polycephalum
RNA editing: exploring one mode with Apolipoprotein B mRNA 33.
Plant cells
Movement of virus and photoassimilate in the phloem: a comparative analysis 741.
Plant genetics
Differential repair of excision gaps generated by transposable elements of the 'Ac family' 507.

Plasminogen
Urokinase and urokinase receptor: A paracrine/autocrine system regulating cell migration and invasiveness 105.
Platelet-derived growth factor (PGDF)
Endocytosis of growth factor receptors 375.
Polyamines
Polyamines, chromatin structure and transcription 561.
Positive control
Bacteriophage λ: Transactivation, positive control and other odd findings 285.
POU proteins
Bending of DNA by transcription factors 25.
The specification of sensory neuron identity in *Drosophila* 293.
Preimplantation development
Early human embryo metabolism 259.
Regulation of zygotic gene activation in the mouse 531.
Primordial germ cells (PGCs)
Germ line development 699.
Progestins
Challenges: The pharmacological manipulation of members of the transforming growth factor beta family in the chemoprevention of breast cancer 71.
Protein complexes
Discerning the function of p53 by examining its molecular interactions 703.
Protein motifs
A signature for the HMG-1 box DNA-binding proteins 539.
The aminoacyl-tRNA synthetase family: Modules at work 675.
The spliceosome 595.
Protein phosphorylation
Regulation of zygotic gene activation in the mouse 531.
The telophase disc: its possible role in mammalian cell cleavage 201.
Protein secretion
The secretion pathway of IgA protease-type proteins in Gram-negative bacteria 799.
Protein splicing
Protein splicing: Excision of intervening sequences at the protein level 667.
Protein structure
A signature for the HMG-1 box DNA-binding proteins 539.
Allosteric proteins: From regulatory enzymes to receptors 625.
Amino acid neurotransmitter transporters: structure, function, and molecular diversity 323.
An apparent dimerization motif in the third domain of alpha-fetoprotein: Molecular mimicry of the steroid/thyroid nuclear receptor superfamily 427.
Assembly of intermediate filaments 605.
Dynamic aspects of adhesion receptor function – Integrins both twist and shout 391.
Integrins hold *Drosophila* together 383.
Interaction of rhodopsin with the G-protein, transducin 43.
Mechanisms of transactivation by retinoic acid receptors 309.
Neu and its ligands: from an oncogene to neural factors 815.

The aminoacyl-tRNA synthetase family: Modules at work 675.
The evolutionary history of the first three enzymes in pyrimidine biosynthesis 157.
The role of conformational change in serpin structure and function 461.
The secretion pathway of IgA protease-type proteins in Gram-negative bacteria 799.
γ-tubulin: the hub of cellular microtubule assemblies 637.
What the papers say: Do specific interactions between transmembrane helices play a part in signalling transduction? Exploration with the insulin receptor 61.
Protein trafficking
Protein targeting to dense-core secretory granules 317.
Protein trafficking along the exocytotic pathway 231.
Proteinases
The crystal δ-endotoxins of *Bacillus thuringiensis*: models for their mechanism of action on the insect gut 469.
The role of conformational change in serpin structure and function 461.
Proteolysis
Urokinase and urokinase receptor: A paracrine/autocrine system regulating cell migration and invasiveness 105.
Proto-oncogenes
Vav: a potential link between tyrosine kinases and *RAS*-like GTPases in hematopoietic cell signaling 179.
Pyrimidine biosynthesis
The evolutionary history of the first three enzymes in pyrimidine biosynthesis 157.
Pyrimidine dimers
Genes controlling nucleotide excision repair in eukaryotic cells 249.

Q-beta replication
Ligation-based DNA diagnostics 761.

Rapamycin
Immunosuppressants: tools to investigate the physiological role of cytokines 731.
ras
Vav: a potential link between tyrosine kinases and *RAS*-like GTPases in hematopoietic cell signaling 179.
RecA gene
Protein splicing: Excision of intervening sequences at the protein level 667.
RecA protein
Relating biochemistry to biology: How the recombinational repair function of the recA protein is manifested in its molecular properties 617.
RuvA, RuvB and RuvC proteins: cleaning-up after recombinational repairs in *E. coli* 355.
Receptor-ligand interactions
Allosteric proteins: From regulatory enzymes to receptors 625.
An apparent dimerization motif in the third domain of alpha-fetoprotein: Molecular mimicry of the steroid/thyroid nuclear receptor superfamily 427.
Dynamic aspects of adhesion receptor function – Integrins both twist and shout 391.
Endocytosis of growth factor receptors 375.
Mesodermal growth factor candidates elected 128.
Neu and its ligands: from an oncogene to neural factors 815.
Odor receptor proteins recloned: molecular realities of olfactory discrimination in fish 487.
The assembly of signalling complexes by activated growth factor receptors 171.
The crystal δ-endotoxins of *Bacillus thuringiensis*: models for their mechanism of action on the insect gut 469.
Tyrosine kinase receptors in the control of epithelial growth and morphogenesis during development 185.
Urokinase and urokinase receptor: A paracrine/autocrine system regulating cell migration and invasiveness 105.
What the papers say: Do specific interactions between transmembrane helices play a part in signalling transduction? Exploration with the insulin receptor 61.

Regeneration
Contact inhibition in the failure of mammalian CNS axonal regeneration 807.
Regulatory mechanisms
Retinoic acid
Retinoic acid and craniofacial development: molecules and morphogenesis 9.
The making of a feather: homeoproteins, retinoids and adhesion molecules 513.
Retinoic acid receptors
Mechanisms of transactivation by retinoic acid receptors 309.
Retinoids
Challenges: The pharmacological manipulation of members of the transforming growth factor beta family in the chemoprevention of breast cancer 71.
Retrotransposable elements
Anoxia, wound healing, VL30 elements, and the molecular basis of malignant conversion 265.
RFLP maps
Towards construction of an overlapping YAC library of the *Arabidopsis thaliana* genome 63.
Rhodopsin
Interaction of rhodopsin with the G-protein, transducin 43.
Rhombomeres
Is segmentation generic? 277.
Ribonucleotide reductase
DNA damage and cell cycle regulation of ribonucleotide reductase 333.
Ribozymes
RNA as a catalyst: natural and designed ribozymes 299.
RNA processing in prokaryotic cells 113.
RNA-binding proteins
Translational regulation by mRNA/protein interactions in eukaryotic cells: Ferritin and beyond 85.
RNA editing
RNA editing: exploring one mode with Apolipoprotein B mRNA 33.
RNA polymerase
Common mechanisms for the control of eukaryotic transcriptional elongation 659.
Fine tuning of DNA repair: Mechanisms, prevalence and consequences 209.
Simplicity amidst complexity in transcriptional initiation 559.
RNA processing
Mammalian cells can trans-splice. But do they? 347.
Pre-mRNA secondary structure and the regulation of splicing 165.
RNA as a catalyst: natural and designed ribozymes 299.
RNA editing: exploring one mode with Apolipoprotein B mRNA 33.
RNA processing in prokaryotic cells 113.
The spliceosome 595.
RNA structure
Pre-mRNA secondary structure and the regulation of splicing 165.
RNA as a catalyst: natural and designed ribozymes 299.
RNA processing in prokaryotic cells 113.
'RNA Worlds'
RNA as a catalyst: natural and designed ribozymes 299.
RNase P
RNA processing in prokaryotic cells 113.
c-*ros*
Tyrosine kinase receptors in the control of epithelial growth and morphogenesis during development 185.
Ruv proteins
RuvA, RuvB and RuvC proteins: cleaning-up after recombinational repairs in *E. coli* 355.

Saccharomyces cerevisiae
Genes controlling nucleotide excision repair in eukaryotic cells 249.
Protein splicing: Excision of intervening sequences at the protein level 667.
The centromere of budding yeast 451.
The evolutionary history of the first three enzymes in pyrimidine biosynthesis 157.
The spliceosome 595.
What determines whether chromosomes segregate reductionally or equationally in meiosis? 1.
Salmonella typhimurium
Exploitation of host signal transduction pathways and cytoskeletal functions by invasive bacteria 17.
Sarcoma virus
Anoxia, wound healing, VL30 elements, and the molecular basis of malignant conversion 265.
Scatter factor
Tyrosine kinase receptors in the control of epithelial growth and morphogenesis during development 185.
Schizosaccharomyces pombe
Feedback controls and G2 checkpoints: fission yeast as a model system 775.
Schrodinger, E.
"What is life?" – Still a good question, fifty years on 767.
Secretory granules
Protein targeting to dense-core secretory granules 317.
Secretory pathways
Protein targeting to dense-core secretory granules 317.
Protein trafficking along the exocytotic pathway 231.
Segmentation
Is segmentation generic? 277.
Molecular mechanisms of segmental patterning in the vertebrate hindbrain and neural crest 499.
Retinoic acid and craniofacial development: molecules and morphogenesis 9.
Senescence
Senescence and the genome or, Change and decay in all except lobsters, I see 359.
Werner syndrome and biological ageing: a molecular genetic hypothesis 421.
Sensory neurons
Odor receptor proteins recloned: molecular realities of olfactory discrimination in fish 487.
The specification of sensory neuron identity in *Drosophila* 293.
Sensory organs
In search of the machinery for spatial patterning of animal epithelia 757.
Serpins
The role of conformational change in serpin structure and function 461.
seven-up
Defining a neural ground state and photoreceptor cell identities in the *Drosophila* eye 827.
Sex determination
Altering sex ratios: The games microbes play 695.
Sex ratios
Altering sex ratios: The games microbes play 695.

Sexual development
Genetic control of fungal differentiation: The three sporulation pathways of *Neurospora crassa* 365.
SH domains
Vav: a potential link between tyrosine kinases and *RAS*-like GTPases in hematopoietic cell signaling 179.
Signal sequences
Protein targeting to dense-core secretory granules 317.
Protein trafficking along the exocytotic pathway 231.
Signal transduction
Chemosensory regulation of development in *C. elegans* 791.
Dystrophin as a mechanochemical transducer in skeletal muscle 413.
Endocytosis of growth factor receptors 375.
Environmental regulation of virulence factors in *Bordetella* species 99.
Exploitation of host signal transduction pathways and cytoskeletal functions by invasive bacteria 17.
Intracellular pH regulation in the early embryo 523.
Odor receptor proteins recloned: molecular realities of olfactory discrimination in fish 487.
The assembly of signalling complexes by activated growth factor receptors 171.
The molecular biology of taste transduction 645.
Vav: a potential link between tyrosine kinases and *RAS*-like GTPases in hematopoietic cell signaling 179.
snRNPs
The spliceosome 595.
Somatic cell genetics
Genes controlling nucleotide excision repair in eukaryotic cells 249.
Werner syndrome and biological ageing: a molecular genetic hypothesis 421.
Spemann's organizer
In pursuit of the functions of the *Wnt* family of developmental regulators: Insights from *Xenopus laevis* 91.
When cells take fate into their own hands: differential competence to respond to inducing signals generates diversity in the embryonic mesoderm 135.
Spermidine
Polyamines, chromatin structure and transcription 561.
Spermine
Polyamines, chromatin structure and transcription 561.
Spindle poles
Meiosis, mitosis and microtubule motors 399.
Spliceosomes
Pre-mRNA secondary structure and the regulation of splicing 165.
The spliceosome 595.
Splicing
Mammalian cells can trans-splice. But do they? 347.
RNA as a catalyst: natural and designed ribozymes 299.
Spore germination
Cellular dedifferentiation and spore germination in *Dictyostelium* may utilize similar regulatory pathways 131.
Steel factor
Steel factor and c-Kit receptor: From mutants to a growth factor system 77.
Steroid receptors
An apparent dimerization motif in the third domain of alpha-fetoprotein: Molecular mimicry of the steroid/thyroid nuclear receptor superfamily 427.
Supercoiled DNA
Simplicity amidst complexity in transcriptional initiation 559.
T cells
Immunosuppressants: tools to investigate the physiological role of cytokines 731.
Taste stimuli
The molecular biology of taste transduction 645.
Telomeres
Telomeric DNA binding proteins 555.
Telophase disc
The telophase disc: its possible role in mammalian cell cleavage 201.
TGF-β
Challenges: The pharmacological manipulation of members of the transforming growth factor beta family in the chemoprevention of breast cancer 71.
Thyroid hormone
Gene expression during metamorphosis: An ideal model for post-embryonic development 239.
Timing mechanisms
Is segmentation generic? 277.
Tissue interactions
Mechanisms of neural crest cell migration 221.
Topoisomerases
Multiple bacterial topoisomerases: specialization or redundancy? 445.
SV40 DNA replication intermediates: Analysis of drugs which target mammalian DNA replication 121.
Toxin action
Conditional cell ablation in *Drosophila* 491.
The crystal δ-endotoxins of *Bacillus thuringiensis*: models for their mechanism of action on the insect gut 469.
Transcription
Fine tuning of DNA repair: Mechanisms, prevalence and consequences 209.
Transcriptional elongation
Common mechanisms for the control of eukaryotic transcriptional elongation 659.
Transcriptional regulation
A signature for the HMG-1 box DNA-binding proteins 539.
An apparent dimerization motif in the third domain of alpha-fetoprotein: Molecular mimicry of the steroid/thyroid nuclear receptor superfamily 427.
Bacteriophage λ: Transactivation, positive control and other odd findings 285.
Bending of DNA by transcription factors 25.
Cellular and molecular diversity in muscle development: news from *in vitro* and *in vivo* 191.
Common mechanisms for the control of eukaryotic transcriptional elongation 659.
Discerning the function of p53 by examining its molecular interactions 703.
Divergence in the role of MADS box genes in the determination of floral organ identity 691.
Dynamics of DNA methylation during development 709.
Environmental regulation of virulence factors in *Bordetella* species 99.
Genetic control of fungal differentiation: The three sporulation pathways of *Neurospora crassa* 365.
Glowing reports on biorhythm research 755.
Human UDP-glucuronosyl transferases: chemical defence, jaundice and gene therapy 749.
Mechanisms of transactivation by retinoic acid receptors 309.
Regulation of zygotic gene activation in the mouse 531.
Retinoic acid and craniofacial development: molecules and morphogenesis 9.

Simplicity amidst complexity in transcriptional initiation 559.
The p53-*mdm2* autoregulatory feedback loop: A paradigm for the regulation of growth control by p53? 689.
X Chromosome inactivation: The feminine mystique continues 825.

Transducin
The molecular biology of taste transduction 645.

Transduction
Interaction of rhodopsin with the G-protein, transducin 43.

Translational regulation
Translational regulation by mRNA/protein interactions in eukaryotic cells: Ferritin and beyond 85.

Transmembrane proteins
Dynamic aspects of adhesion receptor function – Integrins both twist and shout 391.
Integrins hold *Drosophila* together 383.
Neu and its ligands: from an oncogene to neural factors 815.
What the papers say: Do specific interactions between transmembrane helices play a part in signalling transduction? Exploration with the insulin receptor 61.

Transport mechanisms
Movement of virus and photoassimilate in the phloem: a comparative analysis 741.

Transport proteins
Amino acid neurotransmitter transporters: structure, function, and molecular diversity 323.
Cystic fibrosis: prospects for therapy 485.
The blood-brain barrier: morphology, molecules, and neurothelin 341.
The crystal δ-endotoxins of *Bacillus thuringiensis*: models for their mechanism of action on the insect gut 469.
The secretion pathway of IgA protease-type proteins in Gram-negative bacteria 799.

Transposable elements
Differential repair of excision gaps generated by transposable elements of the 'Ac family' 507.

***trans*-splicing**
Mammalian cells can trans-splice. But do they? 347.

Tribolium castaneum
Structure and function of the homeotic gene complex (HOM-C) in the beetle, *Tribolium castaneum* 439.

Trichothiodystrophy (TTD)
Genes controlling nucleotide excision repair in eukaryotic cells 249.

tRNAs
The aminoacyl-tRNA synthetase family: Modules at work 675.

Tropomyosin
Pre-mRNA secondary structure and the regulation of splicing 165.

Trypanosomes
Mammalian cells can trans-splice. But do they? 347.

γ-tubulin
γ-tubulin: the hub of cellular microtubule assemblies 637.

Tyrosine kinases
Neu and its ligands: from an oncogene to neural factors 815.
The assembly of signalling complexes by activated growth factor receptors 171.
Tyrosine kinase receptors in the control of epithelial growth and morphogenesis during development 185.
Vav: a potential link between tyrosine kinases and *RAS*-like GTPases in hematopoietic cell signaling 179.

UDP-glucuronosyltransferases
Human UDP-glucuronosyl transferases: chemical defence, jaundice and gene therapy 749.

uPA cycle
Urokinase and urokinase receptor: A paracrine/autocrine system regulating cell migration and invasiveness 105.

Urokinase
Urokinase and urokinase receptor: A paracrine/autocrine system regulating cell migration and invasiveness 105.

vav
Vav: a potential link between tyrosine kinases and *RAS*-like GTPases in hematopoietic cell signaling 179.

Viral movements
Movement of virus and photoassimilate in the phloem: a comparative analysis 741.

Viral replication
SV40 DNA replication intermediates: Analysis of drugs which target mammalian DNA replication 121.

Viral structure
Dogs, distemper and Paget's Disease 783.
Gene delivery to neurons: is herpes simplex virus the right tool for the job? 547.

Virulence factors
Environmental regulation of virulence factors in *Bordetella* species 99.

Werner syndrome
Werner syndrome and biological ageing: a molecular genetic hypothesis 421.

***Wingless* (*wg*)**
The origin, patterning and evolution of insect appendages 567.

Wnt proteins
In pursuit of the functions of the *Wnt* family of developmental regulators: Insights from *Xenopus laevis* 91.
When cells take fate into their own hands: differential competence to respond to inducing signals generates diversity in the embryonic mesoderm 135.

Wound healing
Anoxia, wound healing, VL30 elements, and the molecular basis of malignant conversion 265.

X chromosome
X Chromosome inactivation: The feminine mystique continues 825.

Xenopus laevis
Cyclin synthesis: Who needs it? 149.
In pursuit of the functions of the *Wnt* family of developmental regulators: Insights from *Xenopus laevis* 91.
Localized RNAs and their functions 651.
Meiosis, mitosis and microtubule motors 399.
Mesodermal growth factor candidates elected 128.
When cells take fate into their own hands: differential competence to respond to inducing signals generates diversity in the embryonic mesoderm 135.

Xeroderma pigmentosum (XP)
Genes controlling nucleotide excision repair in eukaryotic cells 249.

YACs
Towards construction of an overlapping YAC library of the *Arabidopsis thaliana* genome 63.

Yersinia
Exploitation of host signal transduction pathways and cytoskeletal functions by invasive bacteria 17.

Zygotic genome activation
Regulation of zygotic gene activation in the mouse 531.
